PRIVATE AND CONFIDENTIAL

Master Data Collaboration and Analytics Services Agreement

NORTHHAVEN OFFSHORE ANALYTICS PROGRAMME

Agreement No. NH-DA-2026-004
Prepared 14 October 2026 | Effective 1 November 2026

Between

Northhaven Offshore Energy Limited
of 18 Harbour Exchange, Cork, Ireland
The Operator, Project Owner and User

Helixwell Services Oy
of 42 Meridian Quay, Turku, Finland
The Supplier and Data Holder

Asterbridge Research and Analytics Limited
of 7 Research Crescent, Dublin, Ireland
The Research Provider and Services Provider

The Parties agree to deliver an instrumented well-services and subsurface analytics pilot for the fictional Northhaven offshore licence area. The programme combines controlled equipment-data access, commissioned operational deliverables and collaborative research using a managed analytics environment. Operational control remains with the Operator.

This Agreement comprises clauses 1 to 18 and Annexes I to VI. The initial Work Order is fully specified in Annex II. The Parties intend the operative terms to be binding only on execution by all Parties. Signature blocks appear on page 28.

Synthetic test agreement. All entities, addresses, personnel, assets and transactions in this document are fictional. No signature is represented as genuine. The substantive terms are drafted as a coherent commercial scenario, rather than extracted model clauses.

EXECUTION PARTICULARS

Agreement particulars and contents

Particular	Agreed position
Project and assets	Northhaven programme; fictional wells NH-01 and NH-02; equipment sets HW-710 and HW-720.
Project Period	1 November 2026 to 31 October 2028, subject to clause 17.
Initial committed fees	EUR 536,000 excluding VAT; no minimum purchase beyond Annex II.
Primary / recovery locations	Dublin, Ireland / Turku, Finland; access restricted to Ireland and Finland.
Commercial and legal contacts	Named representatives and reserved .example email addresses on page 28.

MAIN AGREEMENT

1 Definitions and interpretation 3-4
2 Purpose, scope and precedence 5
3 Governance, personnel and responsibilities 6
4 Work Orders, changes and acceptance 7
5 Data provision, interfaces and quality 8
6 Permitted uses and prohibited activities 9
7 Confidentiality and Identified Trade Secrets 10
8 Personal Data and documented instructions 11
9 Information security and systems access 12
10 Third parties, locations and transfers 13
11 Service levels, support and continuity 14
12 Audit, inspection and compliance records 15
13 Background, Deliverables and Research Results 16
14 Publication and commercial exploitation 17
15 Fees, invoices and financial administration 18
16 Warranties, liability and insurance 19
17 Term, suspension, switching and deletion 20
18 General provisions, notices and disputes 21

INCORPORATED ANNEXES

I Data catalogue and retention schedule 22
II Initial Work Order and commercial schedule 23
III Security, locations and approved subcontractors 24
IV Personal Data processing particulars 25
V Background and Results register 26
VI Switching, retrieval and deletion plan 27
Execution and notice details 28

OPERATIVE TERMS

1. Definitions and interpretation

These defined terms apply throughout the Agreement and its Annexes. A definition alone does not confer ownership or authorise Processing.

1.1
"Agreement" means this executed agreement, its six Annexes and any Work Order or amendment signed in accordance with clause 4. A service ticket, click-through term, purchase-order boilerplate or unilateral website update is not part of the Agreement.

1.2
"Operator" means Northhaven Offshore Energy Limited. **"Supplier"** means Helixwell Services Oy. **"Research Provider"** means Asterbridge Research and Analytics Limited. **"Party"** means any one of them; **"Parties"** means all three.

1.3
"Project" means the Northhaven offshore analytics programme described in clause 2 and Annex II. **"Project Period"** means the period stated on page 2. **"Work Order"** means a written commitment stating tasks, Deliverables, acceptance criteria, price and authorised Processing.

1.4
"Data" means the digital information expressly included in Annex I, together with its Metadata and corrected versions. Data does not include unrelated customer information, proprietary source code, undisclosed algorithms or the Supplier's internal manufacturing designs merely because those items exist on the same system.

1.5
"Source Data" means the observations, measurements and records in datasets D01 to D03 before substantive analytical transformation. **"Metadata"** means schema, units, timestamps, provenance, quality flags, calibration references and documentation needed to understand or use Data.

1.6
"Background" means pre-existing or independently developed rights, software, methods and information identified in Annex V, with the stated restrictions. A Party may not retrospectively label a Commissioned Deliverable as Background to avoid an agreed assignment or licence.

1.7
"Commissioned Deliverables" means the Operator-specific reports, dashboards, configurations, processed datasets and trained model artefacts expressly identified as commissioned in Annex II. **"Research Results"** means other new methods, code or findings generated in the Project, excluding Source Data and Commissioned Deliverables.

1.8
"Joint Results" means Research Results created through inseparable intellectual contributions of two or more Parties. Financial support, provision of equipment or supply of Data alone does not establish joint authorship or a share of intellectual property.

1.9
"Confidential Information" means non-public information disclosed or obtained through the Project that is marked confidential or should reasonably be understood to be confidential, including Data, site information, credentials, business information and unreleased Results.

1.10
"Identified Trade Secrets" means specific information listed in Annex I, or designated under clause 7.4, with its holder and reasons for protection. Designation alone does not establish legal trade-secret status.

CLAUSE 1 - CONTINUED

Defined terms and interpretation

The following definitions continue clause 1. References to legal instruments mean those instruments as applicable to the relevant activity, including mandatory amendments. Contractual permissions remain subject to applicable law.

1.11
"Personal Data" means information relating to an identified or identifiable natural person within the meaning of the GDPR. Pseudonymised information remains Personal Data where a person can be identified using reasonably available additional information.

1.12
"Processing" means operations performed on Data, including collection, recording, storage, adaptation, analysis, use, disclosure, combination, restriction and erasure. **"GDPR"** means Regulation (EU) 2016/679. Controller, processor, data subject and personal data breach have the meanings given by the GDPR.

1.13
"Data Act" means Regulation (EU) 2023/2854. This Agreement also establishes voluntary contractual rights where statutory access rights do not apply. It does not determine the applicability of the Data Act simply by naming a Party a User or Data Holder.

1.14
"Managed Environment" means the segregated analytics tenant, interfaces and storage operated by the Research Provider for the Operator at the locations in Annex III. **"Services"** means the integration, analytics, hosting, support and research tasks agreed in a Work Order.

1.15
"Authorised User" means a named individual approved for a specific role and period under clause 9. **"Approved Subcontractor"** means an entity expressly listed in Annex III or subsequently approved under clause 10. Affiliate status alone does not make an entity authorised.

1.16
"Security Incident" means an event compromising, or credibly threatening, the confidentiality, integrity or availability of Data, Services or access credentials. It includes unauthorised model extraction and transfer to an unapproved location, whether or not Personal Data is involved.

1.17
"Exportable Data" means Data and service input, output and Metadata generated or co-generated through the Operator's use of the Services, including relevant configurations and the digital assets listed in Annex VI. Lawful exclusions are limited to the specified provider-internal categories and must not obstruct switching.

1.18
"Permitted Purposes" means only the purposes allocated by clause 6 and Annex I to the receiving Party. **"Publication Package"** means the manuscript, figures, data extracts, code and supporting material submitted for review under clause 14.

1.19
"Business Day" means a Monday to Friday excluding public holidays in Ireland. Calendar-day deadlines include weekends. A mandatory statutory deadline uses its statutory meaning; the contractual definition cannot extend it. All timestamps and deadlines are recorded in UTC.

1.20 Interpretation. Including means including without limitation. A reference to a clause is to the main Agreement unless an Annex is expressly named. A Party shall not resolve uncertainty by expanding its own access or use. It shall seek a written clarification under clause 4 while maintaining the existing lawful scope.

OPERATIVE TERMS

2. Purpose, scope and precedence

2.1 Project objective. The Parties shall evaluate equipment condition, detect data-quality failures and improve reproducible subsurface analytics for wells NH-01 and NH-02. The Project is a limited operational-support and research collaboration. It does not authorise extraction of hydrocarbons, alteration of a well-control system or deployment of autonomous operational decisions.

2.2 Initial scope. Annex II commits the Supplier to instrument-data integration and calibration support and the Research Provider to a segregated analytics service, commissioned reports and specified research tasks. The Operator shall provide lawful site access, validated operational context and suitably qualified decision makers. Additional wells, assets or users require a signed Change Order.

2.3 Access basis. The Operator owns or leases the equipment identified in Annex II and instructs the Supplier to make the agreed Data available to the Operator and, on its behalf, the Research Provider. Each Party shall cooperate with lawful statutory access requests. No purchase of analytics, research or consulting Services is a condition of exercising a non-waivable data-access right.

2.4 No unqualified data ownership. Each Party retains its statutory, contractual and intellectual property rights in information it lawfully contributes. Permissions in this Agreement are defined by dataset, purpose, recipient and time. Possession of a copy, provision of hosting or payment of an invoice does not create a broader right to use or disclose Data.

2.5 Order of precedence. Mandatory applicable law prevails. For conflicts, Annex IV prevails on Personal Data Processing; Annex III prevails on minimum security and location controls; clauses 1 to 18 prevail on other matters; then the remaining Annexes apply. A later signed amendment prevails only where it expressly identifies the provision replaced. A Work Order cannot silently reduce protection.

2.6 Completeness of schedules. Annexes I to VI contain the agreed initial dataset scope, delivery arrangements, prices, security controls, Processing particulars, Background rights and exit plan. No external webpage, unidentified standard contract or unpublished project handbook is incorporated by reference. An external law citation is not a substitute for an operational instruction.

2.7 Separate operational contracts. Existing equipment supply, well-services and facility safety arrangements remain in force to the extent they address other activities. This Agreement governs the Project Data and Services. If a Party identifies a conflict affecting permitted use, safety or lawful disclosure, it shall notify the other Parties before acting on the conflicting instruction.

2.8 Human control. Analytics are advisory. Only the Operator's designated competent personnel may approve operational action. A prediction shall show its model version, confidence limitations and source-data time. The Supplier and Research Provider shall not market the pilot as a certified safety system or imply that research evaluation is operational acceptance.

OPERATIVE TERMS

3. Governance, personnel and duties

3.1 Steering Committee. Each Party shall appoint one voting representative and one alternate. The Operator chairs the Steering Committee, and the Research Provider maintains the decision register. The Committee meets monthly by secure conference and quarterly for a documented review of progress, costs, risks, data access and forthcoming publications.

3.2 Reserved decisions. All three Parties must approve a change to Permitted Purposes, a new recipient, a new Processing country, a material security reduction, commercial release of Joint Results or admission of a new Party. A budget or research-plan decision does not itself grant a licence, modify Annex IV or authorise disclosure of another Party's information.

3.3 Ordinary decisions. A quorum requires one representative of each Party. Routine scheduling decisions may be taken by two votes, provided they do not increase another Party's cost or reduce its rights. Written resolutions shall identify the decision, effective date and signatories. Silence, a meeting invitation or attendance at a demonstration is not approval.

3.4 Operator duties. The Operator shall validate supplied contextual records, appoint a Data Steward, maintain the re-identification key for dataset D03 and decide access requests involving its operational information. It shall assess lawful bases and any necessary impact assessments for its Personal Data Processing and give personnel the required information about access monitoring.

3.5 Supplier duties. The Supplier shall maintain the agreed interfaces, provide calibration and provenance records, identify any known restriction on supplied Data and promptly correct errors attributable to its systems. It shall not withhold agreed Data to gain an advantage in a price, research or equipment dispute except to the extent a specific lawful withholding ground applies.

3.6 Research Provider duties. The Research Provider shall operate the Managed Environment, maintain reproducible analysis records, separate commissioned tasks from research tasks and enforce the dataset-specific permissions. It shall appoint a Security Lead and a Publication Officer. Those appointments do not shift responsibility away from the Research Provider.

3.7 Personnel. Each Party shall use qualified personnel bound by confidentiality and acceptable-use obligations. Named access is individual and non-transferable. Replacement of a key person requires advance notice and an appropriate handover. Research students, visiting researchers, Affiliates and subcontractors have no automatic entitlement to access.

3.8 Site safety. Personnel visiting a site shall complete the Operator's induction, follow the approved work permit and stop unsafe work. The Project grants no write access to well-control or safety systems. A safety stop shall be recorded with reasons; it does not justify continued use of collected Data for an unrelated purpose.

3.9 Escalation and conflicts. An unresolved governance issue shall be escalated to the authorised representatives within five Business Days. A member with a material conflict of interest shall disclose it and abstain from the affected decision. No Committee decision binds a Party financially beyond the signatory powers specified in clause 4.

OPERATIVE TERMS

4. Work Orders, changes and acceptance

4.1 Binding Work Order. Annex II is Work Order NH-WO-001 and is approved by execution of this Agreement. Each later Work Order shall identify the purchasing Party, performing Parties, scope, dataset identifiers, locations, Deliverables, dates, acceptance tests, fees, dependencies and responsible personnel. A Work Order binds only its signatories unless all Parties expressly join it.

4.2 Authority. The Operator's Programme Director may commit fees within the approved budget. Supplier and Research Provider commitments require their respective commercial representatives. Only all Parties' authorised legal signatories may amend clauses 2.5, 6 to 10, 13, 14, 16 or 17, or approve a change reserved by clause 3.2.

4.3 Change proposal. The proposing Party shall provide a numbered Change Order stating the reason, affected provisions, Data fields, intended use, security and privacy assessment, delivery consequences and revised price. The receiving Parties shall respond within ten Business Days. Work outside the existing scope shall not start before the required signatures are obtained.

4.4 Protective updates. A provider may apply a security patch or configuration repair without prior approval where it does not expand Processing, move Data, degrade agreed access or materially alter the Services. It shall record the change and notify affected Parties. An emergency measure that has a material impact shall be reviewed under clauses 9.7 and 17.3.

4.5 Submission. A Deliverable shall be submitted with its version, checksum, acceptance evidence, documentation, known defects and any incorporated Background or third-party software. The review period begins only when the required package is complete. The Operator shall provide a written acceptance or a reasoned rejection identifying the failed criterion within ten Business Days.

4.6 Correction. The performing Party shall correct a validly rejected Deliverable without additional charge and resubmit it within ten Business Days, or within another agreed remediation period. The same tests apply to the corrected package. A dispute about one component shall not prevent acceptance and payment for a separately usable conforming component.

4.7 No deemed acceptance. Payment, use for testing, receipt of Data or failure to respond does not constitute acceptance. The performing Party may escalate an overdue review under clause 3.9. Acceptance does not waive a latent defect, security obligation, source-provenance requirement or any expressly continuing warranty.

4.8 Research criteria. A research milestone is accepted against the agreed experiment, reproducibility evidence and delivery of the report, rather than a guaranteed scientific outcome. Negative or inconclusive results may satisfy a properly performed research task. This distinction does not excuse falsification, negligent data handling or failure to deliver promised documentation.

4.9 Dependency delays. A Party claiming a dependency delay shall notify it promptly, identify the missing input and propose mitigation. The Parties shall record any revised milestone. No Party may manufacture a dependency by imposing an unagreed data format, blocking export or withdrawing a necessary licence already granted under clause 13.

OPERATIVE TERMS

5. Data provision, interfaces and quality

5.1 Dataset scope. The Supplier shall make D01 and D02 available to the Operator and the Research Provider in accordance with Annex I. The Operator shall provide the approved D03 records. The Research Provider shall produce D04 and D05 and maintain D06 access records. Unknown fields, unlisted personal identifiers and unrelated source-system records shall not be imported.

5.2 Delivery. Equipment telemetry shall be delivered through an authenticated, read-only interface at intervals not exceeding five minutes while a site connection is available. Daily manifests shall identify received records, missing intervals and corrected versions. A site communications outage shall be flagged; buffered records shall be replayed without presenting them as live measurements.

5.3 Interoperability. The agreed transport is HTTPS with authenticated service identities. Structured exports shall use UTF-8 CSV or Apache Parquet, with JSON Metadata and UTC timestamps. The Supplier shall provide units, coordinate reference information where applicable, sensor identifiers and calibration references. A proprietary viewer alone is not an adequate export mechanism.

5.4 Quality obligations. The supplying Party shall perform the checks in Annex II before release, disclose known limitations and correct errors within its reasonable control. It shall not fabricate a missing observation, conceal a recalibration or remove an outlier without retaining an auditable reason. Raw observations shall remain distinguishable from corrected or estimated values.

5.5 Provenance. Every delivered batch shall retain source identifier, collection time, ingestion time, schema version and quality flags. Corrections shall be versioned and linked to the superseded records. The Research Provider shall retain sufficient lineage to reproduce an issued report using its stated inputs and processing version, within the applicable retention period.

5.6 Schema changes. A non-emergency change to a field, unit, identifier or interface shall be notified at least thirty calendar days before implementation and tested in a segregated environment. The Supplier shall support the prior agreed schema for sixty calendar days unless an earlier change is required for safety or law and a compatible workaround is supplied.

5.7 Secure exchange. Data shall be transmitted only through the agreed encrypted channels. Email attachments, personal cloud accounts, unmanaged removable media and consumer file-sharing links are prohibited. Each receiving Party shall acknowledge a material batch failure and shall quarantine records containing unexpected Personal Data, malicious content or a classification inconsistent with Annex I.

5.8 Corrections and access requests. The Operator's Data Steward shall route a quality or access request to the responsible Party. The Party shall acknowledge within two Business Days, provide a substantive response within five Business Days and identify any specific impediment. A statutory shorter deadline takes precedence. Permitted portions shall continue to be supplied during a dispute about other portions.

5.9 No exclusivity. Nothing in this Agreement prevents the Operator from lawfully receiving equivalent Data from another source or using another analytics provider. The Supplier and Research Provider shall not introduce interface conditions, technical controls or contract terms whose purpose or effect is to obstruct the agreed access or switching rights.

OPERATIVE TERMS

6. Permitted uses and prohibited activities

6.1 Purpose limitation. A receiving Party may access, copy, combine and analyse Data only for the Permitted Purposes allocated to it and only for as long as necessary to perform the relevant task. A broader research ambition, a commercial opportunity or the fact that Data is non-personal does not expand that permission.

6.2 Supplier purposes. The Supplier may use D01 and D02 solely for the following activities within the Project:

(a) performing the agreed equipment-support Services and documenting their delivery;

(b) diagnosing faults, calibrating the identified instruments and assessing Project-specific warranty claims;

(c) monitoring the safety, integrity and reliability of the identified equipment and correcting a verified defect.

6.3 Research Provider purposes. The Research Provider may use the permitted datasets solely to:

(a) produce the Commissioned Deliverables and provide authorised operational-support analytics;

(b) perform the bounded anomaly-detection and uncertainty experiments in Annex II, using D01, D02 and the de-identified task labels from D03;

(c) test reproducibility, verify dataset quality and prepare Publication Packages subject to clause 14.

6.4 Prohibited activities. Neither provider may use Data to infer the Operator's pricing, production strategy or financial condition for competitive advantage; sell or license Source Data; profile workers; train a general-purpose or third-party model; benchmark an identifiable customer; or develop a competing connected product in breach of applicable restrictions. These prohibitions also apply to derived information that reveals the restricted information.

6.5 Bounded model training. Training of the Project-specific model is permitted only within the Managed Environment, on D01 and D02 with approved D03 task labels, and for the experiments recorded in Annex II. Names, direct identifiers, re-identification keys and free-text staff notes shall not be training inputs. Model weights and evaluation artefacts remain controlled Project assets, not a provider-wide training resource.

6.6 Aggregation and anonymisation. Aggregation does not itself create a disclosure right. Before an output can be treated as anonymous and released, the Research Provider shall document its assessment of singling out, linkage, inference and recovery of protected source information. A small cohort, hashed identifier or removal of a name alone is not sufficient. Clause 14 applies to any proposed public release.

6.7 Further use. A new purpose requires a signed amendment identifying the affected datasets, beneficiaries, lawful basis where relevant, safeguards, fees and duration. Approval of a manuscript does not authorise sale of its underlying Data. A provider may retain general skills and unaided know-how but may not invoke residual knowledge to disclose Confidential Information or memorised Personal Data.

OPERATIVE TERMS

7. Confidentiality and trade secrets

7.1 Protection and use. A receiving Party shall protect Confidential Information with at least the care it applies to its own comparable information and no less than reasonable care. It shall use the information only as permitted by clause 6 or an express licence under clause 13. Access shall be limited to persons with a documented need and enforceable confidentiality duties.

7.2 Exceptions. The receiving Party bears the burden of establishing that particular information was lawfully known without restriction before receipt, became public without breach, was received lawfully from an unrestricted third party, or was independently developed without use of Confidential Information. An exception for an individual item does not make a confidential combination or analysis public.

7.3 Required disclosure. Where disclosure is legally required, the receiving Party shall, unless prohibited by law, notify the disclosing Party before disclosure, identify the request and cooperate in seeking lawful protective measures. It shall disclose only what is required, preserve a record and maintain confidentiality for the remainder. A commercial request or subcontractor preference is not a legal requirement.

7.4 Identification of secrets. Annex I identifies the initial Trade Secrets and their holders. A later designation shall state the specific fields or records, holder, supporting reasons and proportionate safeguards. Blanket labelling of all telemetry as secret is insufficient. A later designation shall not retroactively make lawful prior conduct a breach, but future handling shall be reviewed promptly.

7.5 Protective measures. Identified Trade Secrets shall be accessible only to the approved technical roles in Annex III, through monitored read-only sessions or the encrypted Project store. Local unmanaged copies, public repositories and disclosure through model outputs are prohibited. A holder may request a proportionate verification of the safeguards under clause 12 without gaining access to another customer's information.

7.6 Specific suspension. A holder alleging that safeguards are materially inadequate shall identify the affected information, evidence and required corrective measures. Any withholding or suspension shall be limited to the specific information and to grounds permitted by applicable law; undisputed Data shall continue to be supplied. Where law requires authority notification or a high evidential threshold, that requirement remains applicable.

7.7 Review and remedy. The Parties shall review a trade-secret suspension within five Business Days and record restoration criteria. The Operator retains its right to challenge the measure before a competent authority or court. No trade-secret designation permits deletion of requested Data to frustrate review, use for an unrelated purpose or withdrawal of a necessary agreed export interface.

7.8 Survival. Ordinary confidentiality duties continue for five years after the relevant disclosure or termination, whichever is later. Protection of genuine Trade Secrets continues for as long as they lawfully remain secret. Personal Data duties continue while information is retained. These survival periods do not grant a right to retain Data beyond Annex I or Annex VI.

7.9 Publication and security. Publication under clause 14 is permitted only after the applicable review and confidentiality conditions are satisfied. A Security Incident shall not be concealed to protect a publication or commercial milestone. A receiving Party shall promptly return or erase unauthorised copies, preserve the minimum necessary incident evidence and cooperate with lawful remediation.

OPERATIVE TERMS

8. Personal Data and instructions

8.1 Roles. For D03 and the Operator-controlled D06 records, the Operator determines the purposes and means and is controller. The Supplier processes D03 only as necessary for assigned calibration or fault diagnosis on the Operator's behalf. The Research Provider processes D03 and D06 for the Operator's instructed analytics and security tasks. Annex IV sets the binding Processing particulars.

8.2 Separate administration. Each Party acts as an independent controller for its own employee administration, signatory details and necessary commercial contact records. Those records are outside the shared research dataset. A provider may not convert Project Personal Data into its own controller dataset, or infer that its separate employment duties authorise research profiling.

8.3 Lawful collection. The Operator shall determine and document a lawful basis, provide required notices and assess whether a data protection impact assessment is necessary before the affected Processing begins. Neither provider may solicit worker consent on the Operator's behalf without instruction. This Agreement and a Committee vote do not themselves create a lawful basis.

8.4 Documented instructions. The providers shall process Project Personal Data only on the Operator's documented instructions in Annex IV and subsequent valid instructions. They shall not transfer it outside the approved locations or disclose it to a new recipient without the required approval and lawful basis. A provider shall promptly inform the Operator if an instruction appears to infringe applicable data protection law.

8.5 Minimum fields. D03 shall contain role code, pseudonymous technician identifier, task category and time interval only. Names, private contact details, health information, union affiliation, biometrics and free-text performance evaluations are excluded. The Operator shall keep the re-identification key separately. Access to a key requires a distinct, necessary controller instruction and is not authorised for model training.

8.6 Processor duties. Each provider shall ensure authorised persons are bound to confidentiality, implement clause 9 and Annex III, observe the subprocessor conditions in clause 10, and provide the information necessary to demonstrate compliance. It shall assist the Operator with rights requests, security assessments, impact assessments and regulator consultations, taking account of the nature of Processing and available information.

8.7 Requests and breaches. A provider shall forward a data-subject or regulatory request without undue delay and within two Business Days, unless a shorter response is needed. It shall not answer substantively without instruction or a legal obligation. A Personal Data breach shall be notified to the Operator without undue delay, with an initial notification no later than twelve hours after awareness, even if investigation is incomplete.

8.8 Return and erasure. At the end of the instructed Services, the provider shall return or erase Personal Data at the Operator's choice under Annex VI, and erase remaining copies unless Union or Member State law requires retention. Required retention shall be segregated, limited to the legal purpose and documented with its duration. The provider shall make audit evidence available under clause 12.

8.9 Role changes. Processing for an independent research purpose involving Personal Data is not authorised. It requires a separate written allocation of roles, lawful basis, notices and safeguards before Processing. If the Parties genuinely determine purposes and means jointly, they shall first conclude any required joint-controller arrangement; a contract label cannot override their actual conduct.

OPERATIVE TERMS

9. Security and systems access

9.1 Minimum standard. Each provider shall maintain technical and organisational measures appropriate to the risk and no weaker than Annex III. The Managed Environment shall be segregated from other customers, public research environments and operational control networks. Data shall be encrypted in transit and at rest, with documented key ownership, access controls and rotation.

9.2 Identity and roles. The Operator shall approve named Authorised Users and role scopes. Providers shall enforce multi-factor authentication for human access, individual accounts, least privilege and time-limited privileged access. Shared administrator accounts, persistent supplier backdoors and use of another individual's credentials are prohibited. Service identities shall be restricted to the agreed interface and rotated.

9.3 Access lifecycle. Access requires an approved request, training and a recorded start and end date. Role changes shall be checked before access expands. Accounts shall be reviewed monthly, removed within four hours of a notified departure or compromise, and otherwise disabled when the assigned task ends. Access to NH-01 does not confer access to NH-02 or another tenant.

9.4 Endpoints and copying. Access shall use managed, encrypted endpoints meeting the patch and malware-protection requirements in Annex III. Source Data shall remain in the Managed Environment except for approved export to the Operator. The Supplier may maintain its authorised source-system records within the same retention and purpose limits. Printing or removable-media export requires a specific written exception.

9.5 Monitoring. Providers shall record successful and failed authentication, privileged actions, exports, permission changes and deletion jobs. Monitoring shall be proportionate and confined to security and service assurance. Users shall be informed of the monitoring. Logs shall not be repurposed for individual productivity scoring, disciplinary profiling or unrelated employee research.

9.6 Vulnerability management. Providers shall assess reported vulnerabilities promptly, apply critical fixes within seventy-two hours where feasible and document an effective compensating measure if immediate deployment is unsafe. High-risk findings shall be resolved within fourteen calendar days. Exceptions require the Security Lead's risk acceptance, an expiry date and notice to the Operator; acceptance cannot waive applicable law.

9.7 Incident response. A provider shall notify the Operator and affected Party without undue delay and within twelve hours after awareness of a Security Incident. The initial notice shall state known facts, affected systems, potential Data exposure, immediate containment and a contact. Updates shall be provided at least daily while material facts remain unresolved; a reasoned root-cause report is due within ten Business Days after containment.

9.8 Containment limits. A provider may isolate a compromised account, interface or dataset only to the extent necessary. It shall preserve evidence and safe unaffected access, and record the reason and restoration steps. Emergency containment does not permit unrelated analysis of Data, indefinite withdrawal of export rights or destruction of evidence. Recovery shall use verified backups and revalidated permissions.

9.9 Security assurance. The Research Provider shall obtain an independent annual penetration assessment, test restoration quarterly and review access-control effectiveness monthly. Reports supplied to the Operator may redact another customer's secrets but shall disclose material findings affecting this Project. A certificate or successful audit does not replace the agreed controls or relieve a Party of responsibility.

OPERATIVE TERMS

10. Third parties, locations and transfers

10.1 Approved recipients. The initial recipient set consists of the Parties' named Project personnel and the entities expressly listed in Annex III. No Affiliate, consortium partner, visiting researcher, equipment manufacturer or financing entity receives access merely through a business relationship. Each onward disclosure shall have a recorded recipient, dataset, purpose, role and duration.

10.2 Subcontractor approval. A provider proposing a subcontractor shall give at least thirty calendar days' notice with identity, location, service, dataset scope, safeguards and contractual flow-down. Project Personal Data requires the Operator's specific written subprocessor authorisation. Any Party whose Confidential Information would be disclosed must also approve that disclosure. No access begins while the required approval is absent.

10.3 Flow-down and responsibility. The appointing provider shall impose equivalent purpose, confidentiality, security, location, audit, assistance and deletion obligations. It shall remain responsible for the subcontractor's performance of those obligations. A subcontractor may appoint a further recipient only through the same approval process. The provider shall supply relevant contractual evidence on reasonable request.

10.4 Location restriction. Project Data, replicas, backups and processing shall remain in Ireland or Finland at the locations in Annex III. Human access from another country is not authorised simply because storage remains in an approved country. A location change, including remote support, requires the approvals in clauses 3.2, 4 and 8 and any necessary transfer safeguards.

10.5 External transfer. No transfer of Project Personal Data to a third country or international organisation is initially approved. A proposed transfer must be assessed before approval, identify its legal mechanism, risks and supplementary measures, and update Annex IV. Encryption, consent from a commercial representative or approval of a vendor alone does not establish a lawful transfer.

10.6 Authority requests. A Party receiving a demand for Project Data shall assess its legal validity, authority and territorial scope, notify the affected Party unless prohibited, and seek lawful clarification or challenge where appropriate. It shall provide only the information legally required, record the decision and maintain protection of the remainder. It shall not voluntarily provide broader remote access to satisfy the requester.

10.7 Equipment-related sharing. The Supplier may share the minimum non-personal diagnostic extract with an approved repair subcontractor only for the Project-specific fault identified in the disclosure record. It shall remove operational context not needed for the repair. Independent product development, general customer benchmarking and marketing remain prohibited under clause 6 unless separately authorised.

10.8 New participant. Admission of a new research participant requires a signed accession specifying its contribution, dataset permissions, confidentiality duties and rights to Background and Results. Earlier Results are not automatically available. The Parties shall update the applicable registers before granting access; participation in a public workshop or publication is not accession.

10.9 Withdrawal of approval. Where a recipient cannot meet the agreed protection or an objection establishes a material unresolved risk, the appointing provider shall prevent further access and propose a compliant replacement or revised scope. Already disclosed copies shall be returned or erased with evidence. Withdrawal shall be proportionate and shall not erase necessary incident or legal-retention records.

OPERATIVE TERMS

11. Service levels and continuity

11.1 Availability. The Research Provider shall make the Managed Environment available from the Effective Date, including the commissioning period, at least 99.5 percent of each calendar month. M1 acceptance confirms completed integration. Availability is measured at the agreed service endpoint by five-minute probes. The numerator excludes only permitted maintenance and demonstrated Operator-side failures; a failure of an approved hosting subcontractor is not automatically excluded.

11.2 Maintenance. Scheduled maintenance may not exceed four hours per month and requires five Business Days' notice. It shall occur outside the Operator's notified critical operating windows. Emergency security maintenance shall be notified promptly with duration and impact. A provider shall not classify an ordinary capacity failure or expired certificate as planned maintenance after the event.

11.3 Support priority. A loss of access, suspected exposure or inability to export is Priority 1, with a thirty-minute acknowledgement, hourly status updates and a target workaround within four hours. Material degradation is Priority 2, acknowledged within four Business Hours with a workaround target of one Business Day. Other tickets are acknowledged within one Business Day.

11.4 Support hours. Priority 1 coverage is continuous. Business Hours means 08:00 to 18:00 UTC on Business Days, during which routine support is supplied. A ticket shall include the affected service, observed time and safe diagnostic evidence, without unnecessary Personal Data or credentials. The provider shall not refuse to investigate a material incident because a nonessential form field is incomplete.

11.5 Recovery objectives. The Managed Environment shall have a recovery point objective of four hours and a recovery time objective of eight hours for a site-wide hosting failure. The recovery design includes encrypted replication to Turku and quarterly restore tests. These objectives do not authorise transfer to another location, restoration of expired permissions or retention beyond Annex I.

11.6 Continuity plan. The providers shall maintain a documented continuity plan covering personnel loss, supplier outage, cyberattack, loss of keys and site communications failure. Each shall appoint an alternate incident contact. During a disruption, essential data access and export shall be prioritised over new model training and discretionary research experiments.

11.7 Service credits. For availability below 99.5 percent, the Operator receives five percent of that month's hosting fee; below 99.0 percent, ten percent; below 98.0 percent, twenty percent. Only the highest band applies. The credit is applied automatically to the next invoice or paid within thirty calendar days if no invoice remains. Credits do not replace other remedies and shall not duplicate recovery for the same loss.

11.8 Persistent failure. Two consecutive months below 98.0 percent, or three Priority 1 incidents caused by the same unremedied defect within ninety calendar days, constitute a material service failure. The Operator may require a remediation plan and, if the failure is not remedied under clause 17, terminate the affected Services and exercise the exit rights without a separate exit penalty.

11.9 Advisory boundary. Service availability does not guarantee geological interpretation, equipment fitness or safe operational decisions. The Operator shall retain the source evidence and qualified human review required for its operations. The Research Provider shall clearly distinguish stale, missing, inferred and validated measurements and shall not silently substitute a prediction for an observation.

OPERATIVE TERMS

12. Audit, inspection and records

12.1 Compliance evidence. Each provider shall retain records demonstrating its authorised access, Processing, security controls, subcontractor approvals, delivery performance and deletion. The Operator may request relevant records to verify this Agreement and applicable data protection duties. A generic policy statement, service marketing document or unsupported assurance is not sufficient evidence of a disputed control.

12.2 Routine audit. Once per twelve-month period, the Operator may conduct or appoint an independent confidential auditor to conduct a proportionate audit on ten Business Days' notice during normal working hours. The Parties shall first use relevant existing assessment reports where adequate. The auditor may inspect necessary systems, configuration evidence and records but not another customer's unrelated information.

12.3 Additional inspection. The routine frequency limit does not apply after a material Security Incident, credible evidence of non-compliance, a material change to Processing or a regulator's lawful request. Necessary urgent access shall be arranged without undue delay. A provider shall not impose a waiting period that prevents the Operator from meeting a mandatory regulatory deadline.

12.4 Data handling in audit. An audit shall use the minimum information necessary and secure review methods. Copies of Source Data or Personal Data shall not be placed in an auditor's unrestricted repository. The auditor shall be bound to confidentiality and conflict-of-interest requirements. Legal authority to inspect shall not be obstructed by a private confidentiality restriction.

12.5 Findings and remediation. The auditor shall identify findings, affected controls, evidence and severity. The audited Party shall respond within ten Business Days and provide a remediation owner and date. Critical exposure shall be contained immediately; other material findings shall be corrected within thirty calendar days unless a safer substantiated timetable is agreed. The Parties shall verify closure rather than rely solely on a promise to fix.

12.6 Audit costs. The requesting Party bears ordinary external audit costs. The audited provider bears its reasonable internal cooperation costs and shall reimburse reasonable additional verification costs where a material breach is substantiated. Commercial disagreement about costs shall not delay necessary incident containment, statutory assistance or access to existing compliance evidence.

12.7 Financial records. Each provider shall keep invoice support, accepted milestone evidence and approved expenses for seven years after the final invoice, or longer if law requires. Those records shall contain only the minimum commercial information necessary. The financial-retention period does not extend retention of raw telemetry, staff task records or model training copies.

12.8 Project inspections. The Operator may inspect equipment integration and tests at the agreed site, subject to reasonable safety and confidentiality arrangements. Inspections shall not waive the Supplier's duty to correct non-conforming work. The Research Provider shall make experiment plans, code versions and validation summaries available to the Committee without exposing unrelated proprietary code.

12.9 Regulatory cooperation. A Party receiving a relevant regulator or court request shall preserve responsive records lawfully and cooperate with affected Parties. A preservation instruction shall state the specific records, legal basis, custodian and review date. The normal audit programme, including any unannounced regulatory inspection, does not grant permission for independent commercial use of the records.

OPERATIVE TERMS

13. Background, Deliverables and Results

13.1 Background ownership. Each Party retains its Background and the restrictions recorded in Annex V. Project disclosure does not transfer ownership. A contributing Party shall disclose known third-party licence limits before use. Necessary Background shall not be withdrawn during an agreed Work Order unless continued use would be unlawful and a practical substitute is provided without reducing an accrued licence.

13.2 Project access. Each Party grants the other Parties a non-exclusive, non-transferable, royalty-free licence during the Project Period to use the Background strictly necessary for its allocated Project tasks. It may permit approved personnel or subcontractors to act on its behalf within that scope. Source-code disclosure, independent resale and access by a new participant are not implied.

13.3 Commissioned Deliverables. The Supplier and Research Provider assign to the Operator, as created, their assignable intellectual property rights in the Commissioned Deliverables identified in Annex II, excluding incorporated Background. They shall obtain corresponding employee and subcontractor rights and execute reasonable confirmatory instruments. Unpaid fees remain a debt; they do not permit deletion of Deliverables or obstruction of statutory access.

13.4 Embedded Background licence. To the extent necessary to use, maintain, modify or migrate a Commissioned Deliverable for the Operator's own business, its owner grants the Operator a perpetual, irrevocable, non-exclusive, royalty-free licence to the embedded Background identified in Annex V. The Operator may engage a replacement service provider under equivalent confidentiality restrictions. Standalone resale of that Background remains excluded.

13.5 Sole Research Results. A Party owns Research Results independently created by its personnel, subject to employee and third-party rights and the permissions in this Agreement. A result derived from Data does not extinguish restrictions on protected information contained in it. Generic method ownership does not authorise retention or commercial use of the Operator's training data or memorised information.

13.6 Joint Results. The contributing Parties shall record their intellectual contributions and negotiate a written joint-ownership arrangement within ninety calendar days of identification. Until then, each may use Joint Results for its approved Project tasks only; external licensing, patent filing that prejudices another contributor and public release require written agreement of all contributors. The Operator's existing Deliverable rights remain unaffected.

13.7 Results register. A Party shall notify the Committee of a material Result within thirty calendar days of creation, identifying authors, funding task, Data used, proposed ownership, Background and confidentiality status. A disputed ownership label shall be recorded as disputed. The register is evidence of the allocation and does not itself amend an assignment, licence or third-party right.

13.8 Further exploitation. A Party needing another Party's Background or Research Results for independent commercial exploitation shall request a separate licence within twelve months after the Project Period. Terms shall fairly reflect scope, contributions and restrictions. Neither a duty to negotiate nor access during research constitutes an unconditional right to sublicense or receive source code.

13.9 Departure. A withdrawing or defaulting Party retains its established ownership and valid accrued licences, while remaining bound by confidentiality and purpose limits. Necessary licences already granted to the remaining Parties survive within their agreed scope. Access to ongoing shared systems may be revoked for a substantiated risk without cancelling an otherwise continuing licence to a lawfully held Deliverable.

OPERATIVE TERMS

14. Publication and commercial use

14.1 Research dissemination. The Parties intend to publish sound, reproducible findings where publication does not disclose Personal Data, protected Source Data, another Party's Confidential Information or an unlicensed asset. No guaranteed positive outcome or publication quota is agreed. Authorship shall reflect actual contribution and accepted research standards; sponsorship alone does not establish authorship.

14.2 Publication Package. A proposing Party shall send the complete manuscript, figures, supplementary files, code, proposed data extracts and release destination to all Parties at least thirty calendar days before submission. It shall identify the Results relied on and provide the anonymisation and disclosure assessment required by clause 6.6. A materially changed package restarts review only for the changed material.

14.3 Reasoned objection. A Party may object within thirty calendar days on the specific grounds that the package discloses its Confidential Information, impairs protection of a patentable Result, includes an unlicensed asset or creates a substantiated legal or security risk. It shall identify the affected material and the necessary correction. Disagreement with an unfavourable scientific conclusion alone is not a valid objection.

14.4 Patent delay. A reasoned patent-protection objection may delay release for no more than ninety calendar days from receipt of the objection. The objecting Party shall use the period to pursue the necessary filing. The period is not renewable merely by repeating the same objection. At its end, the corrected non-confidential package may proceed subject to the continuing legal and licence conditions.

14.5 No implied data release. If no valid objection is made within the review period, the proposing Party may publish its own eligible Results within the scope already permitted by clause 14.1. Silence does not authorise disclosure of Source Data, Personal Data, Trade Secrets, another Party's Background or Joint Results requiring a separate agreement. Any such release needs the relevant holder's express permission and applicable legal safeguards.

14.6 Public datasets and code. A release to a public repository shall have a versioned package, approved licence, disclosure review, dependency licence inventory and a named maintainer. Public dataset release is not initially authorised. Demonstration notebooks shall use the synthetic demonstration data described in Annex V, not a lightly redacted sample of operational records or staff task logs.

14.7 Commercial exploitation. The Operator may use its Commissioned Deliverables for its own operations under clause 13. The providers may not market a model trained on Project Data, license an identifiable operational dataset or sell benchmarking insights under this Agreement. Any separately approved exploitation shall identify licensed Results, permitted beneficiaries, territory, duration, revenue terms and continuing Data protections.

14.8 Publicity and attribution. Use of another Party's name, logo or alleged endorsement in advertising requires written approval of that Party. Accurate scholarly attribution in an eligible publication may identify a contributor as agreed in the Publication Package. A press release, case study, conference demonstration or investor presentation is a publication for confidentiality review purposes.

14.9 Post-project review. The review procedure survives for Publication Packages based on retained Results. A departing Party remains entitled to review its own protected information but shall not use that right to block publication of another Party's independent eligible Results. Records of release approval and objections shall be retained as contract evidence without extending retention of the underlying restricted Data.

OPERATIVE TERMS

15. Fees and financial administration

15.1 Committed price. The initial Work Order price is EUR 536,000 excluding VAT, allocated as EUR 212,000 to the Supplier and EUR 324,000 to the Research Provider in Annex II. Prices include ordinary secure export, the agreed documentation, routine compliance assistance and exit support in Annex VI. No volume-based egress fee, data-access toll or separate switching charge is payable.

15.2 Fee distinction. The Supplier's monthly fee pays for integration support, quality assurance and Project-specific engineering work. It is not consideration for waiving a statutory access right or obtaining Data to which the Operator is entitled without charge. A disputed engineering invoice shall not be used to impose a new charge for statutory data access.

15.3 Milestones and subscriptions. Setup and research milestone fees become invoiceable after written acceptance under clause 4. Monthly support and hosting fees are invoiced in arrears for the period supplied. Calibration fees are invoiceable after the specified calibration visit and report. No fee becomes payable merely because a proposed milestone date has passed.

15.4 Invoice content. An invoice shall identify the Agreement and Work Order, supplied period or accepted milestone, applicable rate, approved expenses, credits and separately stated VAT. Expense reimbursement requires a prior written approval and supporting receipt. Each provider is responsible for its own employment, corporation and subcontractor taxes unless applicable law requires another allocation.

15.5 Payment and disputes. The Operator shall pay a valid undisputed invoice within thirty calendar days of receipt. It shall notify a reasoned dispute within fifteen calendar days where practicable and pay the undisputed portion on time. The Parties shall resolve the disputed amount through clause 18. Interest on an overdue undisputed amount is eight percent per annum, subject to applicable mandatory law.

15.6 No automatic repricing. Prices remain fixed for the Initial Work Order. A change in cloud charges, a new internal policy, inflation or a different model architecture does not itself vary the fee. Additional Services require a signed Change Order with an agreed rate and maximum commitment. The Operator is not required to order work beyond the stated scope.

15.7 Research cost records. Where a later Work Order uses a cost-reimbursement basis, it shall specify eligible categories, rates, cap and reporting dates. The provider shall maintain timesheets and cost evidence sufficient to distinguish Project work from unrelated development. The Initial Work Order is privately funded; no public grant, tax incentive or public-funder access right is incorporated.

15.8 No sale of Data. No Party receives payment for granting a general right to sell or otherwise exploit Project Data. A separately negotiated licence or compensation arrangement must identify the scope and holder's authority. A royalty or revenue share does not cure an unlawful use, override clause 6 or authorise disclosure of information belonging to another person.

15.9 Termination accounting. On termination, the Operator pays accepted work and subscriptions properly supplied to the termination date, plus unavoidable costs expressly approved in the Work Order. Future subscription fees and unperformed milestones are not accelerated. The providers shall refund prepaid unperformed amounts and apply outstanding service credits within thirty calendar days of final reconciliation.

OPERATIVE TERMS

16. Warranties, liability and insurance

16.1 Authority and performance. Each Party warrants that it has authority to enter the Agreement and will perform its duties with reasonable professional skill and care. Each provider warrants that it will supply conforming Services and exercise its granted licences lawfully. A contributing Party shall disclose known defects, licence restrictions and limitations relevant to the other Parties' agreed use.

16.2 Deliverable warranty. For twelve months after acceptance, a provider shall correct a material defect in a Commissioned Deliverable that causes it to fail the agreed acceptance criteria. The remedy includes corrected documentation and affected configurations. The provider is not responsible for a defect caused solely by an unapproved modification by another Party, but shall substantiate that causal explanation.

16.3 Research uncertainty. No Party warrants a novel scientific outcome, a commercially successful model or the fitness of research findings for every operational purpose. This qualification does not excuse negligent performance, falsification, breach of security, unauthorised Processing or failure to deliver the promised reproducibility evidence. Clause 2.8 continues to govern operational decisions.

16.4 General cap. Subject to clause 16.6, a Party's aggregate contractual liability to the other Parties together under this Agreement is limited to EUR 1,000,000. Claims arising from the same event shall not be counted multiple times to evade the cap. A separately signed Work Order may increase, but shall not silently reduce, the protection for its scope.

16.5 Data-protection and confidentiality cap. For a Party's breach of clauses 6 to 10, its contractual liability to the other Parties together is instead capped at EUR 2,000,000 in aggregate, including reasonable and causally related forensic investigation, containment, notification, restoration and remedial switching costs. This enhanced cap replaces the general cap for those claims; it is not an additional layer for the same loss.

16.6 Uncapped matters. The caps and exclusions do not apply to fraud, wilful misconduct, death or personal injury caused by negligence, payment of properly due fees, or liability that applicable law does not permit the Parties to limit. Nothing limits a data subject's statutory rights, a regulator's powers or a Party's mandatory liability to a third person.

16.7 Excluded loss and mitigation. Except for clause 16.6, a Party is not liable to another for remote or consequential loss of profit, revenue or opportunity. Reasonable data restoration and remedial switching costs within clause 16.5 are not excluded merely because they follow an incident. The claimant shall mitigate loss, avoid duplicate recovery and provide reasonable evidence of causation and amount.

16.8 Third-party rights claims. A provider shall promptly defend or resolve a credible claim that its supplied Deliverable infringes a third party's intellectual property, subject to timely notice and reasonable cooperation. It shall obtain a lawful continuing right, replace the affected item with equivalent functionality or refund the unusable portion. It shall not settle by admitting another Party's liability without that Party's consent; clause 16.4 applies unless clause 16.6 requires otherwise.

16.9 Insurance. Each provider shall maintain professional liability and cyber liability cover of at least EUR 2,000,000 for the Project Period and two years thereafter, with an appropriate claims-reporting provision. It shall provide evidence on request and give prompt notice of material cancellation. Insurance does not replace its obligations, increase a cap or make payment by an insurer a precondition to performance.

OPERATIVE TERMS

17. Term, exit and deletion

17.1 Duration and convenience. This Agreement takes effect on 1 November 2026 after execution by all Parties and continues until 31 October 2028 unless lawfully terminated earlier. The Operator may terminate the affected Services for convenience on thirty calendar days' notice. The Research Provider may not require a longer notice to initiate a lawful switching request.

17.2 Material breach. A non-defaulting Party may terminate the affected Work Order or participation for a material breach not remedied within twenty calendar days after a reasoned notice. Fraud, unlawful Processing or a breach that cannot safely be remedied may justify earlier proportionate termination. The notice shall identify scope and consequences; accrued rights and necessary cooperation remain protected.

17.3 Proportionate suspension. A Party may suspend only the affected access or task where necessary to contain a substantiated security risk, comply with law or address the trade-secret grounds in clause 7.6. It shall notify reasons, review the measure at least every five Business Days and restore access when the ground ends. Ordinary disputed invoices or a research disagreement do not justify withholding an Operator export.

17.4 Switching options. The Operator may instruct migration to another provider, export to its own infrastructure or erasure after termination. Annex VI states the export categories, format, exclusions and acceptance evidence. The maximum contractual notice period is thirty calendar days. Providers shall cooperate in good faith, maintain continuity during the agreed transition and not impose a switching or egress charge.

17.5 Transition. The standard transition shall finish within thirty calendar days after the switching notice period ends. If this is technically infeasible, the Research Provider shall notify the Operator within fourteen working days after the request, give a substantiated explanation and a proposed alternative not exceeding seven months. Any extension shall comply with applicable law; ordinary capacity planning or a commercial objection is not technical infeasibility.

17.6 Retrieval. After the transition ends, the Operator has at least thirty calendar days to retrieve and verify Exportable Data through the secured retrieval workspace. An agreed longer period shall be recorded before expiry. The standard retrieval workspace and listed exit assistance are included in the price; additional live production Services require a separately agreed proportionate fee.

17.7 Erasure and retention exceptions. After successful switching and expiry of the retrieval period, providers shall erase residual Project Data and Operator-generated digital assets as specified in Annex VI, unless a later agreed date or a specific lawful retention obligation applies. They shall erase the customer encryption keys at the erasure deadline and purge inaccessible backup blocks on their documented cycle. A failed migration shall not trigger destructive erasure of the only usable copy.

17.8 Departure and survival. A departing Party shall deliver current work, revoke access and honour continuing licences under clause 13.9. Confidentiality, accrued payment and liability obligations, ownership, valid continuing licences, publication review and dispute provisions survive according to their terms. Survival does not extend a dataset's retention period or permit new Processing after the instructed task ends.

OPERATIVE TERMS

18. General provisions and disputes

18.1 Independent Parties. The Parties are independent contractors. No partnership, agency, employment relationship or authority to bind another Party is created. A Project title or Committee role does not authorise a person to incur an unapproved commitment. Each Party is responsible for the conduct of its personnel and appointed providers within its contractual responsibilities.

18.2 Legal and ethical compliance. Each Party shall comply with laws applicable to its performance, including data protection, export controls, sanctions, anti-bribery, employment and site safety requirements. It shall not offer an improper benefit to obtain access, a publication decision or a purchase. A relevant conflict or suspected unlawful instruction shall be reported to the Committee without undue delay.

18.3 Controlled technology. Before sharing material subject to an applicable export-control restriction, the contributing Party shall identify the item, restriction and any required licence. No Party shall circumvent a restriction by using remote access or an unapproved recipient. The Parties shall seek a lawful alternative where necessary; a broad export-control assertion shall not be used to block unrelated permitted Data.

18.4 Force majeure. A Party is excused from the affected performance only to the extent an event beyond its reasonable control prevents it despite reasonable precautions and mitigation. It shall notify the event and anticipated impact promptly, continue unaffected duties and give weekly updates. Lack of funds, ordinary subcontractor failure or a preventable security lapse is not automatically force majeure.

18.5 Extended disruption. If a force-majeure impediment lasts more than forty-five calendar days, an affected non-defaulting Party may terminate the affected Work Order on ten calendar days' notice. Essential security, lawful preservation, confidentiality and practical exit cooperation continue so far as feasible. Fees are due only for conforming Services actually supplied and approved unavoidable commitments.

18.6 Formal notices. Legal, termination, transfer and amendment notices shall be sent to the designated .example addresses on page 28 with a signed PDF or verifiable electronic signature and retained delivery evidence. Receipt is when acknowledged or objectively delivered without a failure notice, subject to proof; outside 08:00 to 18:00 UTC on a Business Day it is deemed the next Business Day for contractual response periods. Incident reporting under clauses 8 and 9 shall be immediate and does not wait for this business-hours rule.

18.7 Assignment. A Party may not assign its participation or transfer Data permissions without the other Parties' written consent, except that the Operator may transfer its accrued Deliverable rights to a successor to the identified assets that assumes the applicable protection duties. Assignment does not itself authorise a new Processing country, subprocessor or purpose.

18.8 Governing law and disputes. Irish law governs this Agreement. The Parties shall first escalate a dispute to their authorised executives for fifteen Business Days and may then seek voluntary mediation. The courts of Ireland have exclusive contractual jurisdiction, without restricting a mandatory competent authority, statutory data-protection remedy or a Party's right to seek urgent protective relief.

18.9 Entire agreement and execution. This Agreement records the entire agreement for its Project scope. Amendments require clause 4 approval. Invalidity of a provision does not invalidate the rest; the Parties shall replace it with a lawful provision closest to its agreed purpose. Waiver must be express and does not waive a later breach. Counterparts and legally effective electronic signatures are permitted.

INCORPORATED SCHEDULE

ANNEX I: Data catalogue and retention

This Annex fixes the initial dataset scope. Access permissions below are subject to clauses 6 to 10; a retention maximum does not justify keeping information that is no longer necessary.

Dataset	Content and classification	Permitted recipients / active maximum
D01 Telemetry	UTC timestamp, sensor ID, pressure (bar), temperature (C), vibration (mm/s) and quality flags; confidential non-personal equipment data.	Operator, Supplier and Research Provider / rolling 18 months.
D02 Operational context	Well interval, lithology code, equipment configuration and calibration coefficients; confidential; TS-01 applies to coefficients.	Operator and approved technical users of the providers / Project Period.
D03 Task labels	Pseudonymous technician ID, role, task class and interval; Personal Data; no names or free text.	Operator; assigned Supplier support staff; approved Research Provider analysts / 90 days.
D04 Deliverables	Operator reports, cleaned datasets, dashboard configurations and Project-specific model artefacts; confidential.	Operator and providers performing delivery / Project Period, then Annex VI.
D05 Research Results	Generic method code, experimental metrics and manuscripts; confidential until valid release; no implicit Source Data licence.	Project researchers with task approval / term plus 12-month review, subject to clauses 13-14.
D06 Security logs	Account ID, role, timestamp, event and export/deletion record; Personal Data where identifiable.	Operator Security Lead and approved provider security staff / rolling 12 months.

I.1 Identified Trade Secrets. TS-01 consists only of the non-public instrument calibration coefficients supplied within D02. The Supplier is the holder. The protection basis is their confidentiality, commercial value and restricted disclosure. Other D02 operational records remain Confidential Information; they are not designated as Supplier Trade Secrets by this Annex.

I.2 Retention operation. The providers shall enforce rolling deletion by record date for D01, D03 and D06. For Project-period datasets, the end-of-Service export and deletion rules in Annex VI apply. A longer term requires the specific lawful or approved basis, dataset and end date to be recorded before expiry. Existing Operator source records are not deleted merely because a provider's copy expires.

I.3 Backups and evidence. Ordinary encrypted backups rotate within thirty-five calendar days. Expired records shall not return to active use after restoration; the deletion journal shall be replayed. Confirmed incident evidence may be segregated for up to twenty-four months after closure where necessary and lawful. Minimal invoice and contract evidence may be retained for seven years under clause 12.7 without the raw datasets.

I.4 Dataset release gates. D03 identifiers are replaced before model training; the Operator alone keeps the key. Any derivative containing Personal Data, recoverable Source Data or TS-01 inherits the corresponding restrictions. Public release of D01 to D04 is not approved. Approved publication of a D05 finding does not release its input dataset.

INCORPORATED SCHEDULE

ANNEX II: Initial Work Order and fees

Work Order NH-WO-001. Purchaser: Operator. Performing Parties: Supplier and Research Provider. Period: 1 November 2026 to 31 October 2028. Assets: wells NH-01 and NH-02; instrument sets HW-710 and HW-720. No additional asset is authorised.

Committed component	Provider	Fee excluding VAT
Integration and instrument-data onboarding	Supplier	EUR 80,000 on M1 acceptance
Quality assurance and engineering support	Supplier	EUR 4,000 x 24 months = EUR 96,000
Two calibration visits and reports	Supplier	EUR 18,000 x 2 = EUR 36,000
Managed Environment and pipeline setup	Research Provider	EUR 60,000 on M1 acceptance
Hosting, support and routine secure exports	Research Provider	EUR 6,000 x 24 months = EUR 144,000
Three reproducible research milestones	Research Provider	EUR 40,000 x 3 = EUR 120,000
Total initial commitment	Both providers	EUR 536,000

II.1 Milestones. M1 is integration and tenant acceptance by 15 January 2027. Calibration visits are due by 30 April 2027 and 30 April 2028. M2 is the baseline anomaly-detection study by 30 November 2027; M3 is the uncertainty and generalisation study by 31 May 2028; M4 is the final reproducibility and exit-readiness package by 15 October 2028. Research fees correspond to M2, M3 and M4.

II.2 Acceptance tests. M1 requires authenticated read-only delivery, five-minute ingestion during connected operation, at least 99 percent valid records in a seventy-two-hour representative test, explicit missing-data flags, schema checks, successful role-denial tests and a verified Operator export. Research acceptance requires the pre-registered experiment, versioned code, input manifest, metrics, limitations and reproduction instructions; positive performance is not guaranteed.

II.3 Commissioned outputs. Commissioned Deliverables are the NH-specific dashboards, monthly equipment-quality reports, corrected Project datasets, deployment configurations, Project-trained weights, Operator evaluation packs and the final migration package. New general algorithms and reusable method code are Research Results under clause 13.5; embedded Background is listed in Annex V.

II.4 Experiment boundary. Permitted experiments compare threshold and temporal anomaly models on D01 and D02 using coarse D03 task labels stripped of technician identifiers. Evaluation uses held-out time intervals and does not rank workers or compare identifiable customers. The models remain advisory; no automatic well-control action or external model API is permitted.

II.5 Dependencies and expenses. The Operator supplies site induction, lawful contextual inputs and named acceptance reviewers. The Supplier supplies calibration evidence and schema support. The Research Provider supplies reproducibility and licence records. Two stated calibration visits are included; other travel or hardware costs require prior written approval. Exit assistance in Annex VI is included in the committed price.

INCORPORATED SCHEDULE

ANNEX III: Security and provider register

The following controls and locations are contractual minimums. Equivalent technical implementations may be adopted only if their effectiveness is documented and the change does not reduce protection or expand Processing.

Control area	Required implementation
Storage and transmission	TLS 1.2 or later for supported connections; AES-256 or equivalent at rest; per-tenant keys; encrypted backups; key access restricted and logged.
Access	Named identities; MFA; least privilege; privileged sessions approved for a maximum of four hours; monthly recertification; revocation within four hours of notice.
Isolation and endpoints	Separate Project tenant and network segment; managed encrypted devices; endpoint protection; read-only OT gateway; no production control-system write route.
Verification	Daily backup verification; quarterly restore test; annual independent penetration assessment; monthly review of export, deletion and privileged-access records.
Incidents and records	Continuous Priority 1 contact; initial notice within twelve hours; daily material updates; evidence isolation; D06 retained for twelve months.

III.1 Registered locations. The production application and encrypted primary store are at the Research Provider's Dublin Managed Environment. Encrypted recovery replicas and backups are hosted in Turku, Finland. The Supplier's restricted diagnostic workspace is in Turku. Operator export storage is in Cork, Ireland. Human administration and support access are permitted only from Ireland and Finland.

III.2 Approved hosting subprocessor. Baltic Compute Services Oy, a fictional Finnish entity at 9 Server Way, Turku, is approved solely for encrypted recovery storage and infrastructure operations. The Research Provider appoints it and remains responsible. Dataset scope is encrypted D01 to D06, subject to their retention limits; ordinary support has no plaintext content access. Any exceptional plaintext access needs a separately authorised, logged incident instruction.

III.3 Other third parties. No other subprocessor or repair subcontractor is approved at execution. Independent auditors may receive only the minimum necessary evidence under clause 12, after the applicable confidentiality, role and location review. They are not authorised to build a new research dataset or retain an unrestricted copy of logs.

III.4 Role matrix. Operator Data Steward: catalogue, quality and export approval. Operator Security Lead: access and incident oversight. Supplier instrument engineer: D01 and necessary D02; D03 only under an assigned diagnosis instruction. Research analyst: D01, permitted D02 and de-identified task labels. Provider administrator: configuration and infrastructure; content access only when specifically justified and recorded.

III.5 Prohibited credentials and channels. Shared human accounts, hard-coded secrets, personal email transfer, public code repositories, consumer AI services and unmanaged removable media are prohibited for Project Data. Authentication secrets shall not appear in reports or notebooks. Emergency access shall expire automatically and be reviewed by the Operator Security Lead on the next Business Day.

INCORPORATED SCHEDULE

ANNEX IV: Personal Data particulars

This Annex is the binding controller-to-processor schedule for the Project. It applies separately to each provider when Processing on behalf of the Operator and supplements, rather than replaces, clauses 8 to 10 and 12.

Particular	Documented scope
Controller / processors	Operator / Supplier for assigned D03 diagnosis; Research Provider for instructed D03 analytics and D06 security tasks.
Subject matter and duration	Task-labelled instrument analysis and Managed Environment security during the Project Period, plus the limited return, retrieval and deletion operations in Annex VI.
Data subjects / data types	Operator and contractor technicians, approved analysts and authorised users / pseudonymous staff ID, role, task, interval, account identifier and logged security events.
Nature of operations	Receive, validate, pseudonymise where instructed, store, align task intervals, derive coarse labels, provide authorised reports, log access, return and erase.
Purpose and exclusions	Project-specific diagnosis, authorised analytics and service security. No employee ranking, unrelated behavioural analysis, external model training, special-category or criminal-conviction information.
Controller rights and duties	Determine lawful basis and notices; approve scope, access and subprocessors; issue lawful instructions; assess risks; exercise audit, return and deletion choices.

IV.1 Standing instructions. The Operator instructs only the operations and purposes stated above, with Annex I retention and Annex III safeguards. Each provider shall restrict authorised persons to the assigned task and enforce confidentiality. It shall not determine an independent purpose for the shared Personal Data or add identity fields because they would improve research convenience.

IV.2 Assistance. A provider shall give reasonable technical and organisational assistance for data-subject rights, breach assessment, security review, impact assessment and regulator consultation. Rights-request information shall be forwarded within two Business Days; relevant records shall be made available in time for the Operator's applicable deadline. Routine assistance is included; exceptional requested work outside the agreed tasks may be separately priced without withholding essential compliance cooperation.

IV.3 Incident details. Initial breach notice shall identify known categories and approximate numbers of affected persons and records, likely consequences, protective measures and the incident contact. Missing facts shall be supplemented without undue delay. The Operator decides required authority and data-subject notifications. The twelve-hour provider obligation assists, and does not replace or extend, the controller's applicable notification deadline.

IV.4 Subprocessors and legal instructions. Only the hosting entity and restricted role in Annex III are initially authorised. Equivalent processor duties shall be imposed and the appointing provider remains responsible. If law requires Processing beyond an instruction, the provider shall inform the Operator before doing so unless that law prohibits notice; it shall record the legal requirement and limit the Processing.

IV.5 Closure and proof. At the Operator's choice, the provider returns or erases instructed Personal Data and erases residual copies, except information required to be retained by applicable Union or Member State law. It shall record the basis, scope and end date of an exception, restrict further Processing, and provide compliance information and proportionate audit access. No third-country transfer or independent personal-data research purpose is approved.

INCORPORATED SCHEDULE

ANNEX V: Background and Results register

The entries below allocate initial rights. They do not override the dataset restrictions, constitute a public release, or grant access to confidential source code not expressly included.

Register entry	Holder and scope	Agreed access / continuing rights
B01 Equipment firmware and calibration method	Supplier; pre-existing HW-710/HW-720 firmware, source code and internal calibration method.	Project use through documented interfaces only. Source code is excluded. Necessary non-secret interface documentation continues with commissioned exports.
B02 Analytics runtime	Research Provider; pre-existing tenant orchestration and reusable analytics library.	Project execution licence. Runtime components embedded in commissioned configurations may be used by the Operator and confidential replacement provider under clause 13.4.
B03 Operator geological context	Operator; pre-existing well-interval interpretation and authorised operational records.	Project use only. No external licensing, independent commercial inference or public raw-data release.
C01 Commissioned package	Operator; NH dashboards, reports, corrected datasets, Project-trained weights and migration package.	Assignment under clause 13.3; embedded Background licence under clause 13.4. Data restrictions still apply to copies held by the providers.
R01 Generic research method	Creating Party, or contributing Parties for inseparable Joint Results.	Project task access. External exploitation requires applicable Background rights, clause 14 review and a joint-ownership agreement where relevant.

V.1 Licence inventory. Each submitted Deliverable shall identify incorporated third-party components and licence obligations. No undisclosed obligation to release the Operator's source material or disclose protected Background may be introduced through a dependency. The proposing Party shall obtain approval before adding a dependency with materially different redistribution or source-disclosure conditions.

V.2 Joint Results record. The initial Joint Results register is empty. For a new entry, contributors shall record the Result, intellectual contribution, proposed shares, protection lead and permitted interim use. A final joint-ownership arrangement shall cover licensing decisions, patent costs, enforcement, revenue and exit. Until that arrangement is signed, the interim limits in clause 13.6 apply.

V.3 Demonstration material. The Research Provider may generate a wholly synthetic demonstration dataset without copying protected source values or identifiable staff patterns. It shall document its independent generation and disclosure assessment. Synthetic labelling alone does not approve a dataset; public release remains subject to the applicable Publication Package and licence review.

V.4 Publication register. No manuscript, dataset, code release, press statement or commercial licence is approved at execution. Each proposed release shall have an identifier, version, proposed destination, thirty-day review start, objections, correction record and final scope. A patent delay shall show its start and ninety-day maximum; confidentiality removals and needed licences shall be verified before release.

V.5 Retention of Results. The providers may retain lawfully owned non-personal Research Results for the twelve-month post-project review period in Annex I, with continuing protection. Longer research retention requires an agreed scope and basis. A continuing IP right alone does not justify keeping Source Data, Personal Data or a model that permits recovery of protected inputs.

INCORPORATED SCHEDULE

ANNEX VI: Switching and deletion plan

Exit coordination is led by the Operator Data Steward and the Research Provider Security Lead, with Supplier interface support. The Operator selects migration, on-premises export or erasure in its notice under clause 17.4.

Exit phase	Action and verification
Notice and preparation	Acknowledge within two Business Days; record destination and dataset scope; secure contacts, freeze destructive housekeeping for affected unexpired records and issue a transfer plan. Maximum notice: 30 calendar days.
Transition	Complete within 30 calendar days after notice expiry, subject only to the substantiated lawful alternative in clause 17.5. Keep continuity and role controls; transfer full and incremental packages.
Export acceptance	Reconcile record counts and SHA-256 manifests; verify formats, Metadata and restored model/configuration artefacts; test a sample query and identify missing or corrupt items. Record the Operator's acceptance.
Retrieval	Provide at least 30 calendar days after transition through a restricted read-only retrieval workspace. Keep an authorised usable copy pending correction of a failed transfer; do not silently overwrite a defective export.
Erasure and certificate	After successful switching and retrieval expiry, erase active copies and customer keys; revoke credentials; certify datasets, methods, exceptions and dates. Purge inaccessible backup blocks within 35 calendar days.

VI.1 Exportable categories. Export shall include all unexpired D01 to D04, applicable D05 Results needed for the Operator's rights, the Operator-relevant D06 audit trail, schemas, lineage, quality flags, notebooks created for commissioned work, trained Project weights, configuration files and digital assets generated for the Operator. CSV or Parquet, JSON and documented open model formats shall be used as appropriate.

VI.2 Specified exclusions. The only initial provider-internal exclusions are multi-customer billing internals, unrelated tenant records, private infrastructure keys and pre-existing source code not licensed for delivery. Exclusions shall not remove customer configuration, necessary interface documentation or Exportable Data. TS-01 shall be transferred only through the continuing protective measures; secrecy is not a blanket exclusion.

VI.3 Charges and continuity. One complete export, incremental reconciliation, documentation and up to forty hours of coordinated exit assistance are included in the committed fees. No switching or data egress charge applies. Additional bespoke work needs prior priced approval and cannot be made a condition of statutory switching or delivery of the included export. Live Services continue during the agreed transition at the existing proportionate rates.

VI.4 Exceptions and failure. A legal-retention exception shall state the legal basis, precise records, restricted custodian, review date and final deletion trigger. It is not a general analytics archive. Where a transfer fails, the Parties shall preserve the necessary unexpired copy, correct the failure and document a revised retrieval end date. The Operator may request erasure without migration, subject to specific mandatory retention.

VI.5 Certificate and licences. The closure certificate shall list returned and erased datasets, methods, key destruction, backup treatment, recipient confirmations and authorised exceptions. Provide it within five Business Days after erasure. Continuing Operator licences survive. Providers may retain only their own authorised Background and Results, subject to Data restrictions.

SIGNATURES AND CONTACT REGISTER

Execution and notice details

The undersigned are authorised to execute this Agreement, including Annexes I to VI and Work Order NH-WO-001. The intended Effective Date is 1 November 2026. This synthetic document has not been executed; the following signature and date lines are deliberately blank.

Party / representative	Signature and date
Northhaven Offshore Energy Limited Iris Keane Programme Director	Signature: _____ Date: _____
Helixwell Services Oy Mika Salonen Commercial Director	Signature: _____ Date: _____
Asterbridge Research and Analytics Limited Nora Byrne Managing Director	Signature: _____ Date: _____

FORMAL NOTICES AND OPERATIONAL CONTACTS

Party	Notice address / incident contact
Operator	legal@northhaven.example Data Steward: Maeve Doyle - data@northhaven.example Security Lead: Owen Hart - security@northhaven.example
Supplier	legal@helixwell.example Technical Lead: Elina Koski - support@helixwell.example Incident contact: security@helixwell.example
Research Provider	legal@asterbridge.example Security Lead: Leo Quinn - security@asterbridge.example Publication Officer: Sara Lane - publications@asterbridge.example

A change of contact shall be notified under clause 18.6 and recorded without modifying the substantive Agreement. Incident notices shall be sent promptly to the Operator Security Lead and the affected Party's security contact, with a safe acknowledgement channel. No credentials or unnecessary Personal Data shall be included in a notice.

Non-operative provenance note. This fictional scenario adapts concepts from the supplied European Commission model data-access and cloud clauses, the well-services master agreement, and the NCS2030 research collaboration agreement. It combines those themes in newly drafted terms; none of the source organisations is a Party or endorses this document.
